PostagemController

atualizarUsingPUT

atualizar

PUT

/api/v1/postagem/atualizar

Usage and SDK Samples

Curl Java Android Obj-C JavaScript C# PHP Perl Python

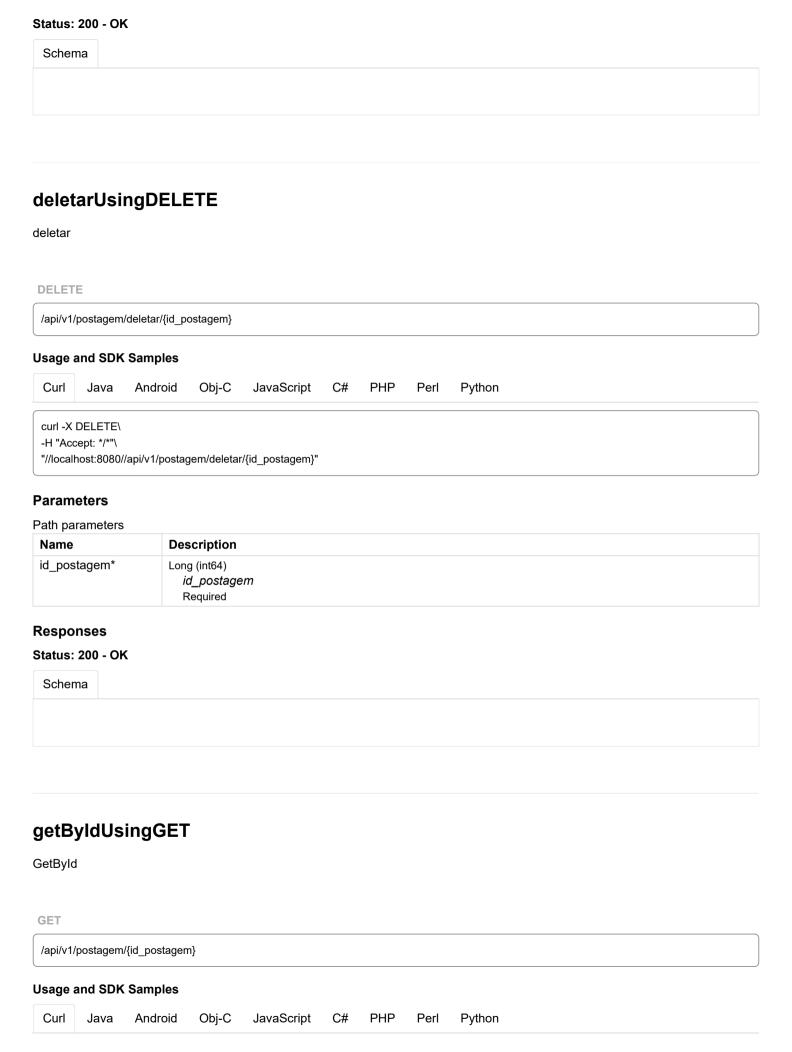

```
curl -X PUT\
-H "Accept: */*"\
-H "Content-Type: application/json"\
"//localhost:8080//api/v1/postagem/atualizar"
```

Parameters

Body parameters

```
Name
                         Description
body *
                          ▼ Postagem { []
                            Required: texto,titulo
                                               ▼ Usuario { []
                            criador:
                                                 Required: nome, senha
                                                 email:
                                                                    string
                                                                    example: email@dominio.com
                                                 id_usuario:
                                                                    integer
                                                 minhasPostagens: ▶[] []
